Comment: Pricing Model & Cost Estimate

For a custom project control logging transaction moduleâ such as a PHP/JSON PSR/SSR control panel with PDF report compiling and flat-file/database lockingâ pricing depends on the deployment scope and delivery model:

Fixed Project Fee (Custom Micro-Application / Control Panel)

\$1,500 â \$3,500 (One-time development cost)

Includes database scheme design, UI control panel, navigation/pagination, PDF output generation, concurrency locking (flock()), and custom field validation.

Hourly / Contract Rate

\$80 â \$150 / hour

Typical effort for designing, building, testing, and securing a standalone transaction control page is roughly 15 to 25 hours.

Per-Transaction SaaS Pricing (API / Cloud Hosted Option)
